Where Quality Breeds Success

# **UCD Valiant**

High yielding, low input quality day neutral.

# Key benefits

- An outstanding day-neutral cultivar for organic and conventional production systems
- Consistently produces high yields early in the growing season
- Highly productive in warmer environments where day-neutral cultivars thrive
- Very large, flavorful, visually appealing fruit

Developed at the University of California, Davis for long season production in typical day-neutral growing regions. UCD Valiant has been a standout in both organic and conventional production systems, typically delivers high early yields of marketable fruit, and has excelled in warmer day-neutral environments. This cultivar produces very large, firm, visually appealing fruit with a long shelf life.

## **High Yields of Marketable Fruit in Organic and Conventional Production Systems**

UCD Valiant is an asexually propagated hybrid suitable for a wide range of day-neutral environments and production systems. UCD Valiant has been one of the most reliable and productive cultivars in organic and low-input production systems and commonly produces high yields of marketable fruit early in the growing season.

# Variety Lowdown

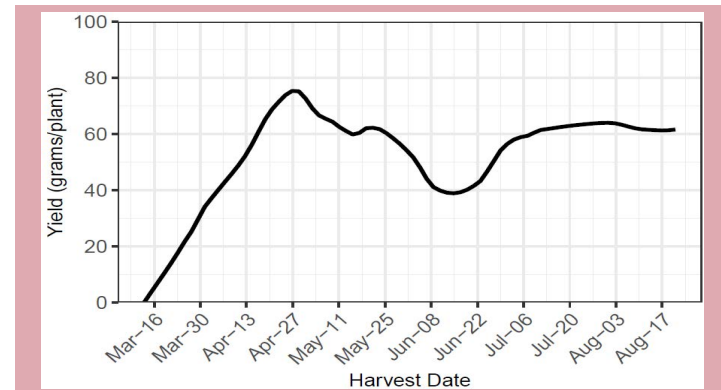

<b>Climate</b>	Typical European day-neutral and everbearing production environments
<b>Yield</b>	Consistently high yields of marketable fruit
<b>Quality</b>	Very large, firm, visually appealing fruit with a long shelf life
<b>Cultivar</b>	Asexually propagated hybrid
<b>Planting Density</b>	45,000 to 50,000 plants/hectare
<b>Chilling Requirements</b>	200 to 400 chilling hours recommended for maximum yield
<b>Seasonality</b>	Early
<b>Plant Habit</b>	Large crowns and vigorous plant

## Market

- Ideal for consistent year round fresh market production
- High yielding and disease resistant

## Offer

- Ideal for consistent year round fresh market production
- High yielding and disease resistant

# Reviews

---

**“We visited California with Global Plant Genetics and were excited to see UCD Valiant there in grower trials. The fruit looked great and the plants very healthy. We are trialing now in Northern Europe and early indications are very positive”**

Werner Hack, Rapo. Netherlands
